Depending on the vehicle model the filler inlet is normally located next to the Diesel filler inlet, or may be in the boot/trunk or the engine bay. Please follow your vehicle manufacturer's DEF-AdBlue® refilling instructions. Handling of the nozzle is similar to conventional ZVA nozzles. In order to dispense the nozzle must be pushed fully onto the filling point of the DEF-AdBlue® tank. Dispensing is done by pulling the lever. When the tank is full, the nozzle will shut off automatically.

Most light vehicles <3,5 t allow a trouble-free filling of the DEF-AdBlue® tanks with a flow rate of not more than 5 l/min. The nozzle should be adjusted to this value for daily operation.
