

HORIZONTAL ELECTRO-HYDRAULIC OIL FILTER CRUSHER "MEC-THOR"

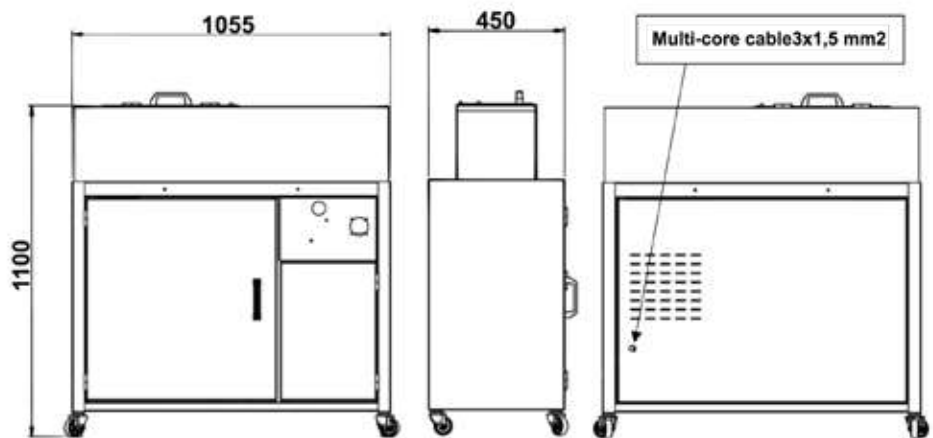

Art. 048-1510-300 Horizontal electro-hydraulic oil filters crusher

It is equipped with a trolley with 4 orientable wheels
The pressing device is based on a cylinder with chromed rod having a stroke of 330 mm.

Advantages:

- The reduction of the filters' volume
- Separate recovery of waste oil and filters
- Facilitation of correct waste disposal

048-1510-300
The drum is not included

048-1510-300 180,00 1,200 1

Technical data

048-1500-300

Voltage AC	V./HZ	230/50
Absorption	A	10
Power	W	1500
Piston Power	kg	15000
Maximum filter size	mm	D.130 L.300
Piston stroke	mm	330
Protection rating		IP43

The horizontal electro-hydraulic crusher "Mec-Thor" compacts the oil filters of every vehicle and achieves a double result: the total recovery of the residual oil and the reduction of the size of the filters. The oil and compressed filters are automatically collected in freefall in two different containers. The filters' container is equipped with a basket that, besides collecting the filters, allows the dripping of the possible residual oil.
